

Postdoctoral Research Fellow Opening at HEC Montréal – Position2

There is a postdoc position opening at HEC Montréal to work on a real-world **last-mile delivery problems** with an **industry partner** on a **MITACS project**. This position is preliminary for one year. The starting date is flexible and is tentatively set as March 2023.

Interested applicants with research interests in **metaheuristics** and **machine learning methods** with strong coding skills are encouraged to apply. Prior work on vehicle routing problem is a plus. Applicants should have obtained their Ph.D. within five years before the starting date in a field closely related to the scientific content of the position. The deliberations will be done on a rolling basis until the position is filled.

We are strongly committed to the equity, diversity and inclusion principles and offer a competitive salary for this position. Interested candidates are welcome to contact Okan Arslan at okan.arslan@hec.ca for more information or to apply at the earliest convenience with

1. a cover letter (at most two pages) with a brief research statement indicating your knowledge and experience in modeling and algorithm development,
2. an up-to-date curriculum vitae (CV) including
 - the level of programming skills,
 - experience with CPLEX or Gurobi,
 - names and email addresses of three potential referees and
3. one research manuscript.

We thank all applicants for their time and interest.
